FOR IMMEDIATE RELEASE

PC-TOOLCRIB Lite Version 7 Industrial Inventory Management Released

EASTON, PA - January 9, 2019

SY-CON Systems, Inc. a market leader of tool, asset, and MRO enterprise and cloud software announces its PC-TOOLCRIB Lite system for small businesses is now available as a new version with additional features and enhancements to improve managing usage, track returnables, procure replenishment electronically for consumable and returnable items, and track spend by employee or department. Numerous improvements have been made throughout the application like expanded forms to increase the visibility and value of the data viewed, enhanced searches with additional supporting information results, improvements to importing/exporting spreadsheet data, and new features that provide expanded capabilities.

For items not stocked and only purchased when needed, a new feature provides the ability to create purchase orders for these types of non-stocked items that can be emailed to a supplier, tracked until received, and cost accounted to the requesting employee or department.   An associated report summarizes or details every non-stock purchase over any time period with total costs for employees, departments, GL account codes, or suppliers.

A newly available mobile handheld barcode scanner that is lighter than previous units with a high visibility touch screen and built-in software to quickly perform all inventory movement transactions like issue, return, cycle count, and receiving wherever the items is located.
